**About the Guidelines**

The International Safety Management (ISM) Code is a key mandatory requirement for merchant ships, critical to the improvement of maritime safety and environmental performance.

Since the launch of the ISM Code there has been a dramatic increase in technology, legislation and general business complexity. Companies can end up with a very large and complicated SMS that can be hard for its users to navigate.

The new fifth edition of the Guidelines on the Application of the ISM Code aims to cut through the background and provide straightforward and comprehensive advice on compliance with the ISM Code for anyone involved with developing, implementing and maintaining Safety Management Systems (SMS), which are critical to successful and efficient ship operations.
